

Transparent Film Packing Machine YQSW-300

The packaging machine is a full-automatic three –dimensional packing machine. Made of materials including BOPP film and PVC, the machine can apply to wrapping the products as a folding hexahedral single-box package. It's an ideal for the cassette packing cases.

This machine is widely used in cosmetics, food, health products, medicine, condom packaging, agricultural and sideline products, audio and video products, culture articles, high-grade gift packages and other industries in various sizes of single-box type items three dimensional transparent film wrapping.

It can feed automatically by conveyor belt, wrapping, folding, side sealing, the upper and lower shaping, counting, and owning self-adhesive security features such as easy to pull. It is one of the best anti-faking methods to mark companies' logos and names in various colors on security tear tape with anti- counterfeiting laser and phosphorescence, very suitable for high-end label products packages.

This type of packing machine is equipped with U-type cutter, with an easy opening in the wrapping products, which is convenient for detaching. It's the best full-sealing equipment to take place of

traditional heat shrinking machine, with the advantages of dust-proof, moisture-proof, ant counterfeiting, anti-pollution.

This kind machine can support single- box type packaging and the whole line packaging after connected to boxing machine, coding machine and the other associated equipment's.

Technical Parameters:

Packing Speed	30-80 packs/min
Packing Size	(L) 40-180mm (W)20-100mm (H)10-90mm
Power Consumption	4.5kw
Working Voltage	220v 50hz
Working Air Pressure	0.8mpa
Machine Weight	About 600kg
Main Machine Size	2000mm*700mm*1400mm
