

DZ(Q)-600LG Cabinet Vacuum Packaging Machine

This machine is a specialized vacuum packaging machine designed for powders and three-dimensional items. It features a vertical pneumatic sealing mechanism, an extra-large stainless steel vacuum chamber, and a transparent, openable vacuum cover, making it suitable for industries such as chemicals, food, electronics, and pharmaceuticals.

The PLC control panel allows for intelligent operation, enabling vacuuming, inflating, and sealing to be completed in one step, thus improving packaging efficiency. The size and material of the vacuum chamber can be customized as needed. A bag support device flattens the bag opening, and a cylinder-driven sealing strip heats and seals the bag, ensuring a smooth, wrinkle-free seal. The vacuum degree is directly controlled by an electrical contact vacuum gauge. Brake casters make it easy to move and fix the packaging machine, offering flexible usage.

Specifications

Model	DZ(Q)-600LG
Sealing Length	600mm
Sealing Width	10mm
Maximun Vacuum	$\leq -0.1\text{MPa}$
Chamber	600mm×350mm×800mm
Power	2.0kW
Voultage	380V / 50Hz
Dimensions	1200mm×800mm×1380mm
Weight	250kg
