

## *DPH-200 Medication Pharmacy Blister Packaging Machine*

This pharmacy blister packaging machine is widely used for blister packing different sizes and shapes of tablet, hard capsule and soft capsule, pill, candy or other solid granule product and so on.

### **Features:**

1. This blister pack packaging machine adopts PVC board spreading roller with pressure to form and an intermittent movement, it is easy to change the mold.
2. Stepless transducer and multi-functional feeder (can be equipped with high-speed disc feeder).
3. Roller type hot sealing with continuing movement made the texture more clear.
4. As printing batch number with cold type or hot type, it is easy to change the batch number, the four printing and cutting column make the machine run stable and high rate of finished product.
5. The whole machine is controlled by PLC with stepless transducer and the interface of the screen is easy to learn.
6. The machine can be shipped separately.
7. Stagger cutting saves the packing material to the greatest extent.
8. High-precise servo stepping.

**Technical Parameter:**

<b>Model</b>	<b>DPH-200 medication blister packaging machine</b>
Max. Cutting frequency	120pers/min
Max. Forming area	205*210mm <sup>2</sup>
Max. Forming depth	12mm
Max.width of packing material	205mm
Max. step length after forming	210mm
Max. step length before cutting	105mm
The packing material core diameter	φ70-76mm
Max. diameter of package material	PVCφ400mm ALU Foillφ280mm
Air consumption	25L/min
Water consumption	3.2L/min
Power supply	380V/50Hz
Power	12KW
Net Weight	1500kg
Overall size	L: 2300*W: 830*H: 828mm
