

Automatic Single-head Capping Machine

This machine is a single-head capping machine, adding a set of arrange the lid. After the filling process, the bottle is tightened by turning the cap after the lid is removed, grabbed and covered. In this way, the labor intensity can be relieved and the labor can be replaced. The equipment is simple in structure. It only needs to change the cap according to the size of the cap. It is an economical and practical capping equipment. Comply with GMP requirements.

Technical parameter:

1. Capping head: 1 head
2. Suitable type.: round, square, flat bottle
3. Suitable diameter: $\Phi 28\text{-}\Phi 72\text{mm}$ (Can be customized)
4. Speed: ≤ 3600 bottles/hour
5. Voltage: 220V, 50Hz
6. Power: 1.0KW
7. Dimensions: 2000*1000*1900mm
