

Pelletizer Type

Pelletizer is used to make pellets of desired sizes. By the nature of the material, the necessary quantity of liquid to form the pellets is added in certain places of material inside the pan. The rolling movement and the addition of moisture cause pellets formation. It is equipped with an easily operated tilting and locking device. This permits adjustment of the infinitely variable setting of the pan angle, over its whole range. For the cleaning of the sides as well as the bottom of the pan and the adjustable scraper is provided. Parts coming into contact with the material to be processed are made of polished stainless steel. The material to be processed is fed manually, or with a metering device, if required. The tilted palletizing pan, which rotates in a clockwise direction, is fitted to the main drive through universal gearing (UD)

Technical Specifications:

Gross Capacity	3 Kg.
Working Capacity	2 Kg.
Dimension in mm	500 x 440 x 220
Net weight in kg	9
Gross weight in kg.	10
