

## *HZ-320 Vacuum Packaging Machine For Cooked Meat*

This is the latest product developed by our company, the use of foreign advanced technology and combination of the DLS series vacuum pump packaging machine's character, Self innovation design and production of automated assembly line packaging machinery, is the first domestic products, completely replace imported equipment. This machine is suitable for various products for vacuum, inflatable, fitted to the plastic/paper/ plastic packaging.

### **Features**

1. Servomotor, Touch screen and PLC control make operating and adjusting easily.
2. With a World first-class vacuum packaging pump made in Germany, advantages include fast speed, steady quality and good durability.
3. Advanced transverse and longitudinal cutting system make change easy and simple and no sides cutting make little waste in material.
4. With a slide chute position, the mould can be replaced easily and accurately. The mould is equipped with a cooling system available.
5. Photoelectric follow-up: color cover film or optical film can be used for packaging, reducing cost and upgrading the products.
6. According to user's requirements for product packaging, nitrogen or other protective gas can be filled into the package after vacuuming.
7. With clamping chains imported, this machine is applicable for stretch shaping of soft films, hard films and semi-hard films with different thickness.
8. Nice-looking appearance of the machine. With even quality of bubble and good sealing performance.

Technical Specifications

Model	HZ-320
Application	food and other concerns
Capacity	200-400 bags per hour
Power	18kw
Air supply	0.8Mpa
