

BO-5/8(18) Output Conveyor

The output conveyor is a type of industrial conveyor system used to transport products from a production line to a designated location, such as a packaging area, inspection station, or shipping dock. Output conveyors are commonly used in manufacturing facilities, warehouses, and distribution centers to efficiently move products from one location to another.

Product Description

- Mainly used to pick up the finished bags from packaging machine.
- The output conveyor is with easy installation and assembling.
- Customer design available.

Technical Parameters

Model	BO-5/8	BO-5/18
Structure	Mild steel/Stainless steel	Mild steel/Stainless steel
Belt width	200mm	450mm
Transport length	1.5m	1.5m
Elevating height	1m	1m
Speed	Adjustable	Adjustable
Power	40W	120W
Weight	80KGS	130KGS
