

Capsule Polishing Machine

Legend Capsule Polishing Machine is a versatile machine used for polishing of capsules after filling operation. The capsules, while moving on the conveyor revolve along their axis due to the angular guides and thus can be inspected minutely. These machines are fitted with rotary spiral double brush Ultra polishing system that ensures a high gloss finish on the capsule.

Salient features:

- VFD control drive.
- Ultra polishing system.
- Separate dust collection system.
- The capsules, while moving on the conveyor revolve along their axis due to the angular guides, thus can be inspected.
- In compliance with cGMP.

TECHNICAL SPECIFICATION

Output	40,000 to 60,000 capsules per hour
Drive Motor	
Inspection Section	0.5 hp
Vibrator	230 V. Single Phase
Width of Inspection belt	6"
