

Belt/Chain Belt Conveyor

The device is applicable to packaging workshop in cosmetics factory, pharmaceutical factory, food and beverage factory product manual packaging or automatic transmission; the bracket is made of stainless steel materials, stainless steel materials used in belt table; light PVC or PU belt; line speed with stepless speed regulation, the beautiful appearance, smooth operation and convenient transport.

Belt Conveyor

The belt conveyor is conveying equipment economical, applicable to transport 100kg following articles or powdery, granular material, has the characteristics of stable operation, low noise, continuous conveying, beautiful appearance. In addition to ordinary belt conveyor can transport materials, can also meet the oil resistant, heat resistant, corrosion resistant, anti-static special material handling.

Chain Belt Conveyor

Chain belt conveyor surface flat and smooth, friction is small, the transition between the transmission lines smooth material, can transport all kinds of glass bottles, PET bottles, cans and other materials, but also transport all kinds of luggage. Chain plate with stainless steel and engineering plastics and other materials, also can use connected to the traction chain on the various structures and forms of flat or scale plate bearing member to supporting and transporting materials.

Technical parameters

| Product name | Belt/Chain belt conveyor |
|--------------------------|------------------------------|
| Belt width (mm) | 250 |
| Conveyor speed (m/min) | 0.9-9 |
| Power (Kw) | 0.75-1.1 |
| Conveyor length (m) | 4-15 |
| Machine size (W*H) mm | 750*750(Can be customized) |
