

Liquid Sachet Packing Machine D-150 Y

Advantages

1. The packaging process is fully automatic and requires no manual operation;
2. The contact parts of the materials are all made of SUS316L stainless steel, in line with GMP standards;
3. Different filling devices can be selected according to the character of the filling materials;
4. Intelligent detection for bag filling and sealing;
5. Germany Siemens PLC system, France Schneider Electric System. Stable performance and durability.
6. Japan OMRON intelligent temperature control system, automatic sealing temperature compensation, temperature control accuracy. The seal is beautiful and generous.
7. The pneumatic originals of the whole machine are all selected from Taiwan Yadeke brand, with long working life and convenient maintenance and replacement.
8. The filling part can be washed directly, and the power supply part should be avoided.

Technical Parameters:

D-150 Y Features:
1.Small size, light weight, can be on the elevator, there is no use of venue restrictions.
2.220V power supply, no power. Low voltage requirements.
3.Four process operations, low failure rate, high stability.
4.A key operation, boot can be used. No professional staff.
5.Replace the bag type, without additional accessories, good compatibility, suitable for a variety of special-shaped bags.
