

Plastic Water Bag Filling Sealing Machine YSDY-500

Product information

1. The plastic water bag filling sealing machine can be widely used for various kinds of liquid package, such as milk, soybean milk, fruit juice, beverage, ice drink, soy sauce, vinegar and wine.
2. It uses single lay PE film as packaging materials. It can automatically sterilized by ultraviolet radiation, bag molding, code printing, precisely filling, sealing and cutting at one time.
3. This machine has adjustment to make the width and quantity of objects, to meet the various capability requirements.
4. Features: stable and reliable performance, easy operation, low failure rate.
5. Working process:

- (1) Bag (sachet)-forming
- (2) UV sterilization
- (3) Thermal vertical sealing
- (4) Date lamination
- (5) Linear bag traction
- (6) Quantitative filling
- (7) Thermal transverse sealing
- (8) Bag-cutting
- (9) Automatic counting
- (10) Photocell monitoring (Available according to client's demand)

Technical parameters:

Model	YSDY-500
Bag size	240-320mm
Packaging rate	30-35 bags/min
Range of measurement	100-500ml
Power	220/380V
Machine size	850×750×1900mm
Filling precision	≤± 1.5%
Machine quality	400kg
