

SRT-20 Plane Labeling Machine

Scope of application: all kinds of glass, plastic, carton and other materials flat, angled labeling (such as various types of bottle top cover, soft bag large infusion, packaging bags, multi-row injection, box corner sealing, etc.).

Process flow: feeding → sub-box → synchronous folder → printing and labeling → defective product detection and rejection → finished product → next process

Features introduction:

1. The labeling motor adopts Yaskawa servo motor and driver, which is high speed and precise.
2. Equipped with German Siemens programmable controller (PLC) and Pro-face touch screen, the operation is simple and fast.
3. The main mechanism is made of SUS304 stainless steel and A6061 high-strength aluminum alloy, which conforms to GMP regulations.
4. Timing belt clamping positioning labeling, convenient adjustment and accurate positioning.
5. Function matching:
 - Batch printing system (hot stamping machine or inkjet printer)
 - Leak labeling, leak printing, unclear CCD image detection and rejection system
 - Germany SICK ultrasonic transparent label detection photoelectric
 - Other special features (such as QR code, barcode reading detection)
