

SD-XGF-series Water Filling Line

The SD-XGF series water filling machine (drinking production line) is a kind of 3-in-1 unit packaging machine. This line is mainly used for production of mineral water or pure water, as well as tea and other liquid. It is a kind of normal temperature production line that fills water in normal atmospheric temperature between 15 and 25, and it is a slew (rotate) filling machine that is popular in the market.

Features of SD-XGF-40-40-12:

1. Finish the whole process of washing filling and capping with high precision and speed.
2. For the filling machine, it adopts bottle-neck block technology, which not only avoids bottle-neck second pollution, but also makes it suitable for different bottle shapes.
3. The Main-frame machine uses frequency conversion timing motor, which can make its convenience adjustment speed within throughput.
4. Out put with 3000bottles per hour to 3600bottles per hour is available for choice.

Features of SD-XGF-80-80-24:

1. High output getting to 36000bottles per hour.
2. Specially designed for the large-scale filling production.
3. It is with special filling valve that can control filling liquid level.
4. The CIP circumfluence pipe can prove rinse effect.
5. Touch screen controlled.

Technical Parameters:

Modle	Capacity				
	330ml	500ml	1000ml	1500ml	2000ml
SD-XGF-24-24-8	8000	6000	4000	3000	2500
SD-XGF-32-32-8	14000	12000	8000	6000	4000
SD-XGF-40-40-12	18000	16000	12000	9000	6000
SD-XGF-50-50-18	26000	24000	15000	12000	10000
SD-XGF-60-60-20	32000	28000	24000	15000	12000
SD-XGF-80-80-24	38000	36000	26000	20000	14000
