

Fully Automatic Filling, Sealing & Capping Machine Model NB-070

A fully automatic filling and sealing machine with pre-formed lids or membrane cut directly from roll. Rotary platform is driven by analogue engine. This filling and sealing machine easily handles up to 20 oz. of volume and utilizes 7 to 9 station rotation platforms depending on cup configuration and capacity. Two filling operations may be preformed in the same cup before sealing.

Machine includes:

- Cup Feeding and Ejection Assemblies
- Lids Feeding and Sealing Assemblies
- Filling Unit
- Rotary Platform
- PLC Control System

Output: 25-50 cups per minute

Product: Powder / Granulated / Pieces / Paste / Liquid
