

Rotary Filling and Capping Machine

The rotary filling and capping machine is automated from filling, capping and bottle retreating, with simple operation and fast packaging speed. It can also change the template and capping head according to different bottles and lids at any time, and it is convenient to load and unload.

The rotary filling and capping machine adopts integrated design of machine, electricity and gas, with compact and reasonable structure, convenient operation and maintenance, stable and reliable performance, and is widely used in various industries such as food and beverage. The electrical and pneumatic components are well-known brands and the quality can be fully guaranteed.

Main Features:

1. High-speed filling head: Each filling head has a weighing and feedback system.
2. Fully automatic capping system: The rotary screw capping system is continuously capped in the Mono block.
3. Intelligent control: 10" Siemens touch screen control panel.
4. Hygienic design: There is no contact between the filling nozzle and the filling bottle to avoid contamination of the filling bottle.

Specifications:

Filling Range	100ml-1L(especially for glass bottle)					
Filling Head	2	4	6	8	10	12
Production Capacity (BPH)	360-450	720-1080	1080-1620	1440-2160	1800-2700	2160-3240
