

## ***GFRSQ - 6 Automatic Wine Plastic Capping Machine***

Stepless adjustable motor speed, round heater, compact structure, low power consumption, microcomputer temperature control.

### **Features:**

The machine is mainly suitable for liquid filling and sealing end of the bottle cap hot shrink bottle.

- 1) Simple structure and working principle, reliable operation and convenient maintenance.
- 2) Stepless adjustable motor speed, round heater, compact structure, low power consumption, microcomputer temperature control.
- 3) The specially developed rubber cap thermal shrinkage head, anti-scald design, heating temperature adjustable, ring heating, uniform shrinkage, smooth, beautiful without wrinkles.
- 4) The automatic rubber cap thermal shrinking machine adopts the combination of automatic cap covering machine and single-head automatic thermal shrinking machine, which is a new electromechanical integration product developed by our company. Pneumatic components all choose FEFTO, SMC and other world famous brands, reliable quality, stable performance, save labor and time. It has many advantages, such as falling cap, taking cap.
- 5) GFRSQ - 6 automatic rubber cap heat shrinking machine adopts the principle of six heat shrinking heads synchronously temperature-adjusting, controlled by microcomputer, and air-blown shrinkage, and automatically lifts the six heat shrinking heads rapidly after shutdown to prevent the rubber cap from burning and scalding.

**Main technical parameters:**

<b>The number type</b>	<b>GFRSQ - 6</b>
Production capacity	3000 vials/h
Applicable bottle height is	150~350mm
Applicable bottle diameter	$\Phi = 60 \sim 100$ mm
Motor power	9.2kw
External dimensions	1000x270x350mm
