

Bottle Unscrambling Turntable CBL-Z

The CBL-Z Bottle Unscrambling Turntable is a convenient, fast, and efficient bottle sorting product produced by our company. It is characterized by easy operation, easy cleaning and maintenance, and can arrange empty bottles placed manually or unloaded by a depalletizer into rows and automatically transport them to filling equipment, usually in conjunction with a conveyor.

Introduction

After empty bottles are manually placed or unloaded by an automated depalletizer into the bottle unscrambling machine, the turntable of the machine rotates. At the same time, the central lever on the turntable achieves the purpose of bottle unscrambling by pushing the empty bottles to the bottle outlet. The turntable has adjustable sliding bars that can be adjusted according to the diameter of the bottles to achieve the best bottle unscrambling effect.

In addition to the standard one-meter diameter, our company can also customize bottle sorting machines in other specifications according to customer requirements.

Specifications

Model	CBL-Z
Power supply	3P AC208-415V 50/60Hz
Maximum bottle diameter	160mm
Bottle unscrambling capacity	80 bottles/min
Turntable diameter	1000mm
Total power	0.8kW
Dimensions	1400*1200*1200mm
