

BG60A-4 Automatic Cup Filling and Sealing Machine

This filling and sealing machine is a full automatic packaging production line. This machine adopts stainless steel fuselage, accords with hygienic requirements and cleanliness. It can be applied to plastic or paper cups, from automatic lift boxes or cups, quantitative filling, heat sealing system, automatic membrane cutting and waste membrane recovery and other functions, and a series of processes can be automatically completed. Adopt the famous brand control system and pneumatic components in Japan, Taiwan and China, which has the characteristics of low failure rate, stable operation and long service life.

Application:

The machine are applicable to fill and seal cups, bowls, boxes, trays, cans, pots and so on, used to fill with liquid, cream or solid material, such as yogurt, milk, jelly, juice, ketchup, fruit salad, pulp, mineral water and so on.

Technical Parameter

Model	BG60A-4
Packing Speed	3200-3600 cups/hour(4 lane cups,can custom)
Voltage	380V/3Phase
Machine Power	4.5KW
Filling Range	10-300ml (can custom)
Cup caliber	Customized according to customer requirements
Air source	0.5MPa-0.75MPa
Dimension	300*100*180 cm
Machine Weight	About 800kg
