

HCP5 Automatic Packing Machine

HCP-5 automatic box packing--body machine is a new product developed by our company in combination with foreign technology. It can be connected to machines such as packing, three-dimensional, heat shrinking, etc. The back end can be directly connected to packing and palletizing to achieve complete back packing production line. The equipment adopts all-aluminum high-end advanced design, adopts imported electrical components, PLC, man-machine interface operation, and has functions such as automatic unpacking, automatic packing, and automatic sealing, which makes the operation process of the equipment more stable and convenient. Industry can use, the equipment meets GMP standards.

Technical parameters:

production capacity	Less than or equal to 5 boxes/minute depending on the number of actions
carton size	Max 550x400x350mm Min 300x180x150mm
Material size	Maximum 500x350x320mm
power supply	Power supply: AC380/three-phase/50Hz Power consumption: 7.5kw
air pressure	Pressure: 0.6MPa Air consumption: less than 1 cubic meter/hour
Dimensions (LxWxH)	4580*2150*2800mm
weight	2500kg
