

F400 Model Automatic Self-adapting Case Sealer

The width and height of the carton are adjusted automatically without manual adjustment, and cartons of different specifications can be used. The upper cover of the carton is automatically folded in, which is smooth and stable. The sealing operation is completed in one go, which is beautiful and labor-saving. It can be used in conjunction with the automated packaging system. The new patented tape applicator does not require a blower to blow up the tape. The patented pressing device is used to make the tape stand upright and not bend down to cause it to be unable to stick. The up and down lifting uses imported brake cylinders for accurate positioning. The adjustable carton size can prevent the carton from getting stuck on the upper tape applicator. The belt drive on both sides uses a special bearing seat for the main drive mechanism, which is high-precision, low-noise, and increases the service life of the belt.

Parameters

Model	F400
Power supply/Power	220W/380V/50/60HZ 1.5KW
Applicable carton	L200-500*W150-500*H150-500mm
Case sealing speed	6-8 cases/min
Tape width	48mm/60mm/72mm
Air supply	6-7kg
Dimensions	1700*880*1450(L*W*H)
Air pressure	0.5-0.6MPa
