

MCYT-CZ-2T Fully Automatic Liquid Filling Machine

Maichi is a professional manufacturer of high-capacity liquid filling machines, capable of filling 10L, 15L, 20L, 25L, and 30L. Equipment can be customized according to different material characteristics, including optional anti-corrosion treatment. High precision and drip-proof design. With 26 years of experience in the filling industry, we help production enterprises reduce costs, improve efficiency, and increase output.

Equipment Description:

1. This machine uses a Programmable Logic Controller (PLC) and high-speed industrial control configuration software for real-time monitoring, making adjustments convenient
2. Each filling head is equipped with a weighing and feedback system, allowing filling volume settings and individual fine adjustments for each head
3. Advanced sensors such as photoelectric sensors and proximity switches ensure no filling occurs without a container; the main machine will automatically stop and alarm if a container is blocked
4. The filling method is submerged type, effectively reducing foam and accommodating materials with different characteristics
5. The machine is manufactured according to GMP standards, with quick-connect pipelines for easy disassembly and cleaning. All parts in contact with materials and exposed surfaces are made of stainless steel. Environmentally friendly, aesthetically designed, and suitable for various working conditions

Equipment Parameters:

- Model: MCYT-CZ-2T
- Heads: 2
- Applicable Container Size(mm): L:160–360,W:100–300,H:250–500, Φ : \geq 40
- Production Capacity: 30kg: 240 bottles/hour
- Filling Accuracy(%): $\leq\pm 0.3$
- Machine Dimensions L×W×H(mm): 1500×1700×2300
- Power: AC220v;50Hz 2kw
