

SED130-9Y-E Automatic Rotary Tablet Press Machine

This machine is a single-press type automatic rotation, continuous tableting machine, which compresses granular raw materials into various tablets. It is mainly used in the production of tablets in the pharmaceutical industry, as well as in the chemical, food, and electronics industries.

The outer cover is a fully enclosed form, the material is stainless steel, and the internal table surface is stainless steel. The surface of the turntable is specially treated to maintain the surface gloss and prevent cross contamination, which meets the requirements of GMP.

The doors and windows equipped with transparent glass can clearly observe the state of the pressing, and can be fully opened, which is easy for internal cleaning and maintenance. All controllers and operating parts are reasonably arranged. The frequency conversion speed regulating device is adopted for electrical speed control, which is convenient to operate, stable in rotation, safe and accurate.

All transmission devices are arranged inside the machine to keep the machine parts clean. Equipped with overload protection device, when the pressure is overloaded, it can automatically stop. This machine is equipped with an electromagnetic brake motor and other safety protection devices, which can also be adjusted and operated during operation.

Product Parameters

Model	SED-130-9Y-E
Number of die (Set)	9
Maximum tablet pressure (Kn)	60
Maximum tablet diameter (mm)	20
Maximum filling depth (mm)	15
Maximum tablet thickness (mm)	6
Turntable speed (r/min)	30
Production capacity (pcs/h)	16200
Motor power (Kw)	2.2
Dimensions (mm)	480*630*1100
Packing size (mm)	630*850*1200
Host weight (Kg)	220
