

Bag in Box Filling Machine

Bag in box filling machine is mainly suitable for liquid filling, filling and capping integrated model with soft plastic bag, single continuous filling and capping. Based on flowmeter technology, our flowmeter is from China. The famous factory, based on root flow meter technology, gives the machine higher precision and lower operating noise.

Bag in box filling machine is made of high quality stainless steel material and meets the requirements of food production. Each process is completed by the PLC control center according to the design and precise through the touch screen. The whole machine is unique, equipped with film length measuring regulator, multi-channel anti-corrosion treatment and high reliability sealing.

Features:

1. It adopts microcomputer control and hybrid stepping motor drive technology to ensure stable and reliable operation, repeatability and low noise.
2. The contact with the material is made of high-quality stainless steel material, which has strong corrosion resistance and no pollutants.
3. With keyboard settings, weighing feedback, automatic correction error, automatic clearing, electronic scale overload protection, calculation and other functions.
4. With high sensitivity, high precision and high reliability, it can meet the packaging needs of different specifications.

Specifications:

Filling Range	2L-25L		
Filling Head	2	4	6
Capping head	2	4	6
Production Capacity (22L)	120-180	240-360	360-540
Precision	$\leq 2\%$
