

Vacuum Testing Machine BWZJ400

This function accurately on-line detection and automatic picking bad pot, when the tank (bottle) in vacuum degree is different, causing the appearance of tank lid (bottle) have different deformation, by examining the cover of small deformation, analyze whether the products meet the requirements of vacuum degree. With touch screen operation, the operation is simple, easy adjustment; Online data analysis, arbitrary data storage tank type, automatic correction, the characteristics of synchronous winks, widely used in many beverage factories, two pieces of aluminum cans cannery, 3-piece cans, glass bottles, and all the other combined with the type of container.

Technical Parameters

MODEL	BWZJ400
CONTAINER TYPE	TIN、ALUMINIUM POT、 GLASS BOTTLE、 PLASTIC CAN ETC.
CONTAINER DIAMETER	>25MM
PRODUCTION CAPACITY	100-400CANS/MIN
TEMP	<35°C
POWER	500W
WEIGHT	60KG
