

Bottle Unscrambler Turntable CED-200

The CED-200 bottle adjustment turntable manufactured by our company is a practical, fast and high-quality bottle sorting equipment. It is characterized by simple operation, easy cleaning and maintenance, and can neatly arrange the empty bottles that are placed manually or unloaded by the stacker and automatically transport them to the filling equipment, which usually works in conjunction with a conveyor belt.

Introduction

1. Bottle feeding: the motor drives the bottle unscrambler turntable to rotate, and the medicine bottles on the bottle storage tray on the bottle unscrambler turntable go through the bottle pushing device, and the medicine bottles are neatly arranged and automatically enter the guide bar. Then enter the track through the guide bar, and the medicine bottles are transported to the joint of the conveyor belt of the photoelectric counting bottling machine. Finally, the bottles automatically enter the conveyor belt for the electronic counting machine to fill the medicine.
2. Bottle collection: the motor drives the bottle unscrambler turntable to rotate, and the bottles are brought to the bottle storage tray from the bridge on the track, and the bottles are gathered in the middle through the guide rod.

Specifications

Model	JF-2/JF-2S
Range of application	Round bottles, square bottles, flat square bottles, special-shaped bottles, etc. of various materials
Production capacity	30~200 bottles/min
Bottle diameter	20-80mm
Power	AC220V 50Hz 0.1kW
Dimensions	900×900×1000mm
Weight	95kg
