

Capsule Filling Machine SED-BJII

SED-BJII type capsule filling machine is a new efficient equipment based on SED-BJI model (old type) after research and development: easier more intuitive and higher loading in capsule dropping, U-turning, vacuum separation in comparison with the old type. The new type of capsule orientating adopts columns pill positioning design, which shortens the time in the replacement of mould from the original 30 minutes to 5-8 minutes. The level type automatic locking device (patent design) improves the efficiency of the lock capsule and reduces the labor intensity of the workers.

Main Features:

1. With button control
2. With vertical type locking system
3. Easy Operation

Technical Parameters:

Model:	SED-BJII
Capsule Size:	#00-#5
Vacuum Pump:	XD-040(40m ³ /hour)
Capacity Of air compressor:	0.1m ³ /min
Noise:	Less than 60dB (A)
Overall Dimensions:	1200*700*1600mm
Packing Dimensions:	1800*800*1800mm
Net Weight:	600Kg
Gross Weight:	650Kg
Capacity:	12,000capsules/hour
Power Supply:	380V 50Hz 2.2Kw
