

Automatic Grain Packing Machine For Rice And Wheat TJ-300K

In the storage of rice bags, there are many reasons for the deterioration of the contents. Among them, the common reason is the poor barrier properties of the film and the tightness of the package. For the former, it is necessary to fully consider the performance and thickness of each layer of material when designing the package to obtain sufficient barrier properties.

Characteristics

1. The Automatic Grain Packing Machine For Rice And Wheat has the perfect combination of high precision and high speed, and is combined with rich weight by computer calculation.
2. The high-precision digital load cell of the Automatic Grain Packing Machine For Rice And Wheat enables accurate metering transients.
3. Chinese/English and other languages LCD operating system.
4. IP65 grade waterproof and dustproof design. All parts are made of stainless steel and are hygienic. The fully sealed design prevents material build-up and is easy to clean.
5. According to the measured characteristics, the opening and closing speed of the hopper can be finely adjusted to prevent crushing and jamming.
6. The Automatic Grain Packing Machine For Rice And Wheat has a powerful automatic data counting function, which records the total number of packages, the pass rate and the single bag error of each batch.
7. Optional equipment: pattern weighing, collecting hopper, printing device, and out-of-tolerance sorting device.

Technical Parameters:

Model	TJ-300K
Packing speed	20-50bags/min
Making bag size	W:30-150mm L:30-170mm
Packing volume	5-330ml
Voltage	220V,1.6KW
Overall dimension	300kg
Weight	1010X730X1780mm
