

## *DPP-80 Blister Packing Machine*

DPP-80 flat type small blister packaging machine is a new product designed for small and medium-sized food factories, pharmaceutical factories, health products factories, hospital preparation rooms with a high degree of automation, especially suitable for the production of small batch and variety of products.

### **Features**

1. DPP-80 blister packing machine has high efficient production capacity, which can quickly complete the packing task and improve the production efficiency.
2. Simple operation: Reduce manual intervention and improve production efficiency.
3. DPP-80 blister packaging machine can be adjusted according to the size and shape of different products to adapt to various packaging needs.
4. High-quality packaging effect: the equipment adopts advanced moulding technology and high-quality materials, which can produce strong and beautiful blister packaging and protect the products from damage.
5. Safety protection measures: the equipment has safety protection measures, such as emergency stop button and safety door, to ensure the safety of the operators.
6. Easy maintenance and cleaning: the equipment has a simple structure, easy maintenance and cleaning, reducing the failure rate and maintenance costs.
7. Reliable performance: DPP-80 blister packaging machine adopts high-quality parts and advanced technology, which has stable and reliable performance and is not easy to fail in long time operation.

### **Product parameter**

<b>Blanking times</b>	10-40 times/min
<b>Production capacity</b>	2400 version/hour
<b>Molding area and depth</b>	80*110*26 mm
<b>Air pressure</b>	0.6-0.8 mpa
<b>Total power</b>	380V/220V 50Hz 3.2Kw
<b>Noise index</b>	<75dBA
