

## ***CGN-208D Pharmaceutical Powder Granule Capsule Filling Machine***

This machine has separated empty capsule feeding station, powder feeding station and adopt horizontal type capsule closing station. The medium processes need to be operated by manual. The machine use three inverters to control the speed of capsule feeding turret, powder feeding turret and the powder feeding auger. All the operation is very easy and simple, can be filled the powder & granule material easily. The machine body and working table adopt stainless steel, it's easy to connect to the vacuum feeder. The machine conforms to the sanitary requirement of pharmaceutical & nutrition industries. It's widely used for filling the powder & granule material in pharmaceutical & nutrition industries.

### **Main technical parameter**

|                     |   |
|---------------------|---|
| <b>Max. Output</b>  | 20000 Capsules/Hour   |
| <b>Capsule Size</b> | Suitable for filling capsule size 00#-4#                            |
|                     | (change parts /molds need to be changed accordingly)                |
| <b>Dosage Type</b>  | Powder material   |
| <b>Power Supply</b> | 380V±10%, 50/60Hz, 3ph, 2.21kw (nonstandard Voltages upon request.) |
| <b>Machine Size</b> | 1290*685*1600mm Net Weight:330KG                                    |
| <b>Packing Size</b> | 1300*1150*1700mm Gross Weight:560KG                                 |
