

L-Type Conveyor

It is mainly used for conveying foodstuffs, crops, pharmaceuticals and chemical products. For example, peanut, candy, dried fruit, frozen food, vegetables, chemicals and other granular or lumpy products, conveying materials from low to high, the machine can perfectly achieve continuous or intermittent conveying as well as the computer combination of weighing and packaging machine combination of quantitative automatic packaging system, and by the control circuit and level control to achieve automatic feeding and stopping automation function, widely used in the food packaging industry.

Main Features

- The frame is all made of 304# stainless steel, so it is especially suitable for the food industry and has a high degree of safety.
- The hopper is made of food-grade plastic polypropylene PP, which is safe and hygienic. safe and hygienic, easy to disassemble.
- The equipment is also controlled by the control circuit and the material level control to achieve Automatic feeding and stopping function.
- The equipment has a very low failure rate.

Main Specification

Equipment Name	L-Type Conveyor
Main Power	0.75 kw
Lifting Volume	2 m ³ /h
Power Supply	220/380V 50Hz (other power can be customized)
Feeding Height	3100 (can be customized)
Material	SUS 304
Weight	250 kg
