

JTJ-IV

Semi-automatic capsule filling machine

Introduction:

This is suitable for filling the capsules with the sizes 0# 1# 2# 3# it is equipped with electric and air control device and automatic counting device, and they make the whole process filling automatically from placing the empty capsule, separating the empty capsule body and filling the body, and locking the capsule the production . it is up to GMP standard

Applications:

This is suitable for filling the capsules with the sizes 0# 1# 2# 3# This machine is equipped with electric and air control device and automatic counting device, and they make the whole process of filling automatically from placing the empty capsule, separating the empty capsule body and filling the body, and locking the capsule the production it can improve efficiency and reduce the labour intensity by using this machine, This machine is reliable in quality, easy to operate, accurate in the filling and it is up to GMP standard, it is the ideal machine for filling the capsule for modern pharmaceutical factories.

Main Technical specifications

Main Technical specifications	
Production capacity	12.5thous pcs/h
Suitable capsule	0/1/2/3
Type of filler	Powder/grain
total power	2.2kw
Over all dimensions	(LxVxH)1400x950x1480 mm
weight	300kg
Attach equipment	Vaccum pump: one set
