

Horizontal Flow Wrapper

Series 90

H90

H90 (shown)

Performance Output

Units wrapped and sealed
at speeds up to 90 ppm

Applications

fresh, frozen, & prepared foods
produce
consumer goods

Style

extended end seal
(crimp)

Film Types

polyester
polypropylene
printed or clear film
perforated film

Technical Specifications

Performance Output

Up to 90 ppm
based on a 6" long bag

Dimensions

Machine Size (Approx.)

Length	155"
Width	36"
Height	62"

Infeed Conveyor

Length	92"
Feed Space	54"
Height above floor	37"

Product Discharge

Conveyor	24" Standard 48" Optional
----------	------------------------------

Weight

900 lbs base machine

Utility Connection

Electric supply
230V, 3PH, 60Hz

Packaging Specifications

Maximum Package Size

(Not tolerated simultaneously)

Length	16"
Width	7"
Height	2 5/8" Standard 3 1/2" Optional

Wrapping Material

Maximum Roll Diameter	13"
Maximum Roll Width	20"

Fin Seal Assembly (length seal)

First set	Pulling
Second set	Sealing

End Crimper (cross seal)

1-up x 8" wide	Standard
1-up x 10" wide	Optional

Standard Features

Touch screen monitor
Program up to 15 products
Left-to-right product flow,
facing the control panel
Powder coated frame
Stainless steel covers
Food contact approved conveyor
Overload clutch on crimpers

Optional Features

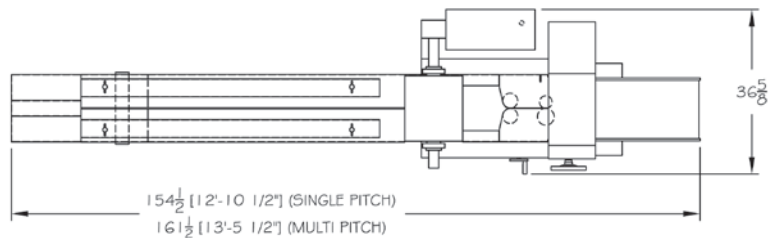

USDA-compliant infeed conveyor
Relieved upper crimper shaft
Roller rider conveyor
Dual parent roll
Extended infeed sections
Dual pitch infeed conveyor
Stainless steel frame & shafts
Printer / code date interface
Electric eye film registration

Optional for model H90

No product – No bag
No gap – No seal

Horizontal Flow Wrapper Series 90

Compact, Flexible package sizes
Low maintenance, Easy changeover

Overview

AmeriPak's exceptionally versatile Series 90 wrappers are designed to minimize downtime while decreasing maintenance and increasing productivity.

Product operating parameters may be set within 15 saved files and recalled instantly for fast, accurate product changeover.

An adjustable forming box functions with a variety of products and also allows for fast product size changeover—no tools required.

The Series 90 is surprisingly compact, saving valuable floor space while offering 4.5 feet of unobstructed product feeding space.

A variety of roll stock materials, printed or clear films are suitable on these machines.

H90 Horizontal Flow Wrapper

The H90's unique EZ-SET end crimper phasing control allows the operator to position the crimper between products during initial setup, then easily fine tune the setting—all while the machine is running. It is powered by a robust 1/2 HP AC drive motor.

Adjustable Former | Easy size changeover for different products

Benefits

AmeriPak's dual pitch infeed conveyor allows for the feeding conveyors pusher spacing to be changed with the flip of a lever. This is critical as the pusher spacing ensures your products are run on an optimum configuration.

AmeriPak's patented roller rider conveyor provides a flat level surface at the end seal area to further assist product transfer. This flat level transfer allows you to run products with a smaller base and a larger heavier top such as a muffin without the product tipping over in the film tube.

Standard Features

Standard Features			Seal Style			
Model	Drive	PPM	Touch Screen	Food Safe	Feed Space	
H90M	mechanical (M)	90	●	●	54"	

Optional Accessories

Lazy Susan (rotary turn table), Adjustable side table, Spare parts kit

Availability of Parts

AmeriPak Machines make extensive use of commercially supplied parts also available through our Rapid Turnaround Parts Program; ensuring the right part, every time.
