

Bottle Accumulation and Feeding Tables

Feeding tables are used for easy and fast feeding of bottles or other similar containers to a filling, labeling or other line.

Accumulation tables act as a buffer at the end of a line to enable bottles or similar containers to easily be handpicked for case packing for instance.

Feeding and accumulation tables are used connected to a conveyor line.

Features:

- Rotating table with diameter 1200, 1500 or 2000mm
- Variable speed drive
- Options available for electrical control
- Wash down safe (IP55)
- Corrosion resistant (stainless steel 304 and engineering plastics construction)
