

AF 200T / *Capsule Filling Machine*

The AF Series is ACG-Pam's flagship capsule filling range with over 1000 installations worldwide. Developed in partnership with pharmaceutical industry the AF series machines are capable of filling various dosage forms including powders, granules, pellets, tablets, and capsules. Components for the AF series are made at ACG Metalcrafts or are sourced from international quality suppliers. All contact parts made of SS316 and other pharma approved material for ease of cleaning and validation. Process Optimization support is provided via our network of service teams.

The AF 200T is a fully-automatic capsule-filling machine. With an output of up to 200,000 capsules per hour, the AF 200T has the highest speeds in the AF range for capsule filling. Ideal for large batches, its robust design provides durability while providing accessibility to ease cleaning and validation. The AF 200T is capable of filling any HGC and HPMC (Veg) capsules of sizes ranging from 000 to 5. It is capable of filling powders, granules, pellets and tablets with additional capabilities of partial filling. In addition, it features an easy-to-operate touch screen, independent control panel, auto shutdown in case of malfunctions, and many more.

Features

- Output of 200,000 capsules per hour
- Couple with host of ancillary equipment for automation
- High yield tamping mechanism forms slug over 5 stations
- Intuitive interface with MMI or IPC with 21CFR Part 11 compliance
- Customized dosage combinations can be filled in capsules
- Can be integrated with Accura an online 100% checkweigher
