

## ***Automatic Bottle Feeding / Collection Turntable TT-080***

This bottle turntable is suitable for feeding or collecting “Round Bottles” automatically in a production line. Much production efficiency can be improved and labor cost will be lowered while not feeding and collecting bottles manually.

### **Field of Application**

- Suitable for all kinds of round bottles and round containers.
- Applicable for larger production demands in packaging production line.

### **Features**

- Few maintenance and user-friendly simple design make an easy operation.
- Cam and shield device of bottle arranging system ensure bottles to be delivered completely without collapse.
- Conveying system is driven by AC motor.
- Turntable diameter and height can be customized depending on bottle size and production capacity.
- Lightweight design is suitable for moving easily or connecting to the existing production line.
- Main construction is made of stainless steel (SUS304), aluminum alloy for durable machine life.
- Laser engraving scale of adjusting system offers convenient adjustments according to the marking.

**Specification:**

TT-080 Automatic Bottle Feeding/Collection Turntable	
Machine Dimension	φ800 (Dia.) x 850(H) mm
Main Construction	SUS304 Stainless Steel / Aluminum Alloy / Carbon Steel / Engineering Plastic
Production Capacity	About 5 ~10 pcs/min (vary on different bottle sizes )
Control System	Controlled by inverter for adjustable speed
Power Requirement	110V, 50/60Hz, Single Phase
