

Auto Bottle Washing Machine

The auto glass bottle washing machine is used for washing new glass bottle before fill beverage. The washing water is clean and sterile water. The glass bottle washing machine is auto rotary type, first the glass bottle rinse turn over the glass bottle to let bottle stand upside down, and then spray the clean water into glass bottle. It is most advanced and suitable device to rinse the glass bottles. It can become a complete auto-product line, if it works with filler and sealer together.

The features of automatic glass bottle washing machine:

1. Please note the bottle clamp, the bottle clamp was used for glass bottle specifically. This kind of bottle clamp can protect the glass bottle. So the auto glass bottle rinsing machine does not break the glass bottle when washing.
2. The rotary type glass bottle rinse was absorbed in high technology from abroad, by adopting gyration method on rinsing device, it can automatically complete working process from bottle entry, bottle rinsing, water removing to sanitized bottle out.

Technical parameter:

Rinsing Capacity	1000-10000 bottles/ hour
Fitting Bottle Size	Height: 150-300mm Diameter:50-90mm
Running Method	Continuous Gyration Running
Number of Rinsing Position	12 -32heads
