

LY-12P Semi Automatic Sticker Labeling Machine

It is suitable for labeling on the upper plane, curved surface and concave surface of the product with a labeling accuracy up to 0.2mm. It is mainly used for precision labeling of electronic components and digital products, such as SD card, mobile phone battery, FPC and mobile phone charger. High precision labeling, highlighting the excellent quality of products, improve competitiveness.

Scope of application:

- 1) applicable label: sticker label, electronic supervision code, bar code, etc.
- 2) applicable products: products with labels required to be affixed on plane, cambered surface, circumferential surface, concave surface, convex surface or other surfaces.
- 3) application industry: widely used in food, toys, daily chemicals, electronics, medicine, hardware, plastic, printing and other industries.

Technical Parameters:

machine type	LY-12P
labeling precision	±0.2mm
labeling speed	15-30pieces per mimute
applicable product size(length)	20mm~200mm
applicable product size(width)	20mm~180mm
applicable product size(hight)	0.2mm~150mm
applicable label size	length: 10mm~60mm
	bottom paper width: 5mm~70mm
label's drum inner radius	Φ76mm
label's largest outer radius	Φ280mm
