

## High Speed Automatic Case Packer ZY-600S

### Main feature:

- Automatically complete the unpacking, forming, bottom bending and bending, at the same time complete the bottom tape sticking, collect the goods and put them into carton by manipulator, top bending and sealing, all of the steps finished by the machine, saving time and labor
- A wide range of short carton, easy adjustment of different sizes of carton
- He whole operation is stable and reliable, the packaging effect is solid and beautiful
- Configuration is high, the main components use international famous brands
- The equipment is simple, easy to maintain
- Automatically correct the carton straight angle

### Technical parameters:

|                                      |   |
|--------------------------------------|---|
| Production capacity                  | about 400 cases / hour  |
| Perfomance of manipulatir            | Double robots hands:12 times / minute(each)                         |
| Box Sealing method                   | Tape sealing or hot melt sealing                                    |
| Paperboard Box Size                  | Minimum:300X250X200mm<br>Maximum:600X500X500mm                      |
| Electricity power                    | AC380 / three-phase / 50Hz power consumption: 7.5kw                 |
| Air supply                           | Pressure: 0.6MPa<br>Air consumption: less than 1 cubic meter / hour |
| Dimensions (length × width × height) | 5000*2000*2900mm  |
| Weight (kg)                          | 3000  |
| Machine Material                     | Aluminum alloy, 304 stainless steel                                 |
