

High Speed Filling and Sealing Machine

This high speed filling and sealing machine is specially designed for filling, capping and sealing 10ml and 20ml linear bottles with easy open lids or aluminum-plastic lids. Meanwhile, it is the main equipment of the oral liquid production line.

It adopts net belt to convey bottles to ensure safe and reliable delivery. The 12 or 16-head partial following bottle filling design can effectively prevent bubbles. Electromagnetic vibration is used in capping bottles.

This high speed filling and sealing machine should adopt box packaging and container transport.

Features:

1. Stable performance, easy operation, advanced design, and compact structure.
2. Integrating filling and sealing work into one machine.
3. PLC and touch screen control are used.
4. Easy to maintain.

Main Parameters:

Bottle Size	10ml~20ml
Production Capacity	7200~13000 bottle/hour and 18000~25000 bottle/hour
Accuracy of Loading	-0,01
Rate of Sealing	≥99%
Power	2KW(3. 5kw)
Electric Supply	380V 50hz 3phase
Size	2200×1200×1620mm
