

GOLDEN LIN

Fully Automatic Rotary Type Tableting Machine DY-T-18

The rotary table machine are used in various branches of the industry for the tableting of the powders. They are used in the chemical and pharmaceutical industry and also in the industry for plastic materials. In the industry for plastic materials the rotary tablet machine is used for preforming the raw material by means of a cold working because it give to the same material a good consistence. Using the rotary tablet machine there are following advantages.

1. To increase the specific gravity of the raw material for reducing the volume of the tablet
2. To obtain the exact weight of the tablet.
3. To obtain small lot production an volume production
4. Double layer tablet works (optional)

Specifications:

Punch Number	18
Motor	3 HP
Product Diameter	21mm
Max. Depth of fill	20mm
Out Put / minutes	630 pcs
Max. Pressure	9000 kgs
Overal Dimension/minutes	850*780*1600mm
Net Weight	700 kgs
