

QVC Series Pneumatic Vacuum Feeder

QVC Series Pneumatic Feeder is used for automatic material conveying for tablet press machine, capsule filler, packing machine, oscillating screen, dry granulator and pulverizer etc. It doesn't require any mechanical vacuum pump, so it is simple structure, small volume, without repairing, no noise and easy being controlled. The high vacuum produced by the vacuum generator prevents the material from being stratified and ensures the uniformity of the composition of the mixture. QVC Series Pneumatic Vacuum Feeder is designed according to international standard. It is easy to clean and meets GMP requirements.

Features:

- High volume of exhaust air and high vacuum suction.
- High quality stainless steel structure.
- Simple operation and easy maintenance.
- Stable performance and low noise.

Technical Parameters:

Model	QVC-1	QVC-2	QVC-3	QVC-4	QVC-5
Transfer volume (Kg/h)	50-300	100-700	300-1500	600-3000	900-6000
Bin volume (L)	1.1	6	12	42	60
Working pressure (Mpa)	0.4-0.6				
Compressed air consumption (NL/H)	180	360	720	1440	2880
