

## *Hopper Volume Powder Screw Feeder*

The packaging machine pesticides, veterinary medicine, premix, additives, milk powder, starch, spices, enzymes, such as powder-feed quantitative packaging

### **Principle Features**

1. The powder packing machine is a mechanical, electrical, optical, one-in, single-chip microcomputer control, automatic quantitative, automatic filling, automatic adjustment functions such as measurement error
2. Fast The spiral of material, optical control technology
3. Wide range of packaging the same quantitative packing machine in the 5-5000 g, through electronic scales keyboard adjustment and replacement of materials of different specifications for adjustable screw
4. A wide range of applications a certain flow of the powder-like, granular materials can be
5. High precision stepper motor and electronic weighing technology
6. Category for bags, cans category, bottles and other packaging containers packed powder Quantitative
- 7 Because Level materials and the proportion caused by changes automatically tracking error can be amended
8. Photoelectric switches control, only artificial bagging, pocket clean and easy to Seal
9. Contact materials and parts are stainless steel production, to facilitate cleaning to prevent cross-contamination
10. Can be configured for the device, more user-friendly
