

JG4-1X Filling and Capping Integrated Machine

Description:

The equipment integrates three functions: automatic filling, internal plugging, and external capping, suitable for 20-500ml series products.

The equipment is suitable for both plastic bottles and glass bottles. After replacing some specifications of molds, it can be applied to various specifications of products.

The device has the characteristics of wide applicability and easy adjustment.

Widely used in various industries such as pharmaceutical factories, food factories, and daily chemical products. The equipment can be equipped with a dust cover according to customer requirements.

This machine can adopt various filling and metering methods such as piston, flow meter, peristaltic pump, injection pump, etc.

The sealing part can be covered by plastic screw or metal rolling.

This machine is designed reasonably, runs stably and reliably, is easy to operate and maintain, and is made of stainless steel material that meets GMP requirements.

It can form a production linkage line with our company's bottle supply machine, bottle sorting machine, bottle washing machine, lamp inspection machine, aluminum foil sealing machine, labeling machine, etc.

Technical parameters

Model number	JG2-1X	JG4-1X	JG6-1X
Filling nozzle	2 nozzles	4 nozzles	6 nozzles
Filling speed:	0-30	0-40	0-50
	per/min	per/min	per/min
Filling scope	20~100ml, 100-500ml,		
Power Supply:	220/380V 50Hz		
Electricity consumption: Power:	≤2KW		
Filling accuracy:	±1-5ml		
Machine Size:	L2500 × W1200 × H1800mm
