

Double Cone Mixer W-500

Composed by two symmetrical cone, the materials inside can move in both transverse and longitudinal directions. The evenness degree reaches more than 99%.

Double-cone mixer is a new type, high-efficiency, fine container-rotating and stirring-type mixing equipment, which is used for uniform mixing of various powdery and granular materials. The machine adopts mechanical seal, the powder will not leak, and the bearing has a long service life. The machine has high mixing efficiency, high work efficiency, low labor intensity and convenient operation. It is widely used in magnetic powder, ceramics, chemical, pharmaceutical, feed and other industries.

Technical Parameter:

Model	W-500
Mixing Barrel Volume (L)	500
Max.Charging Volume (L)	200
Rotary Speed (r/min)	12
Power (kw)	3
Weight (kg)	550
Dimensions (mm)	2400×1100 ×2200
