

NTD Series Lifting Column

The machine is mainly composed of chassis, column, lifting system and other components. When working, first push the hopper containing materials into the fork frame of the hopper elevator, then start the lifting button, and the hopper does lifting movement. After the hopper is in place, turn the chassis and the feeding equipment to be airtight docking, and open the butterfly valve of discharging, so that the material can be airtight transferred to the next process.

The characteristics:

This machine is our company widely absorbs, digesting the foreign advanced technology, combines the national conditions to develop the successful new model. Reasonable structure, stable performance, easy operation, no dead Angle, no exposed screw. The machine is easy to clean, effectively control dust and cross pollution, optimize the production process, fully meet the GMP requirements of drug production.

Technical Parameter:

型号 Model	主要结构尺寸 Main structural dimensions									净负载 Net load	总功率 Power	机器重量 Weight
	A	B	L	L1	L2	H	H1	H2	H3	kg	kw	T
