

Automatic Sausage Vacuum Packing Machine LGDLZ-420 (320/520)

Commercial vacuum packing machine is an automatic vacuum packaging machine, the machine is widely used in all aspects of life. It is mainly used for vacuum packaging of sausage, meat products, fruits, seafood, pickles, vegetables and other products. The sausage vacuum packing machine is of high quality, easy to operate and low operating noise. The use of this machine can greatly improve the production efficiency.

Main Functions

1. German imported pump is installed on the commercial vacuum packing machine. This imported pump has more stable quality and longer durability.
2. Sausage vacuum packing machine can use a variety of packaging materials. In the process of using the machine, customers can choose their own packaging materials such as color film or optical film, which can reduce the cost and improve the product level.
3. The machine can provide customized services. The sausage vacuum packing machine can fill the package with nitrogen or other protective gases freely after the product is vacuumed according to the requirements of the user.
4. The molds of the machine can be unloaded and easily replaced, so the molds can be used on multiple machines, which can effectively reduce waste.
5. Commercial vacuum packing machine is equipped with high-standard clamping chain equipment, which can be used for the stretching and forming of soft film, hard film and semi-hard film of different thickness and special packaging required by some customers.

6. According to the user's requirements for product packaging, the machine can also provide automatic coding and printing system, which can meet the personalized needs of packaging products.

7. In addition, the machine has installed a waste recovery system. This waste recovery system can effectively reduce the waste of raw materials and maintain a good working environment in the factory.

Technical Data:

Model	LGDLZ-420(320 520)
Upper film width	396
Under film width	422
Size of the room	400× (200-400)
Speed	90-110pcs/min
Weight	1500kg
Power	10kw
Dimension	5.8*0.9*1.9m
