

Automatic Cap Loader with Elevator

Description:

The cap elevator is assorted to the capping machine and used for conveying caps into cap unscrambling equipment

Automatic cap elevator

It is specially use for elevate bottle caps so supply the capper machine using. It is use with capper machine together, if change some part it is also can use for other hardware goods elevate and feeding, one machine can more use.

The machine is mainly used for conveying the caps from the lower to a higher position within the hopper cap is a cap machine auxiliary equipment. The delivery of the equipment sent by the wind. The device has a smooth operation, high capacity, easy to control and so on. For plastic cover, aluminum cover transportation.

Applications:

Applicable industries: Screw cap, Metal cap, Grand Cap, Plastic cap and various kinds of cap

Performance advantages:

1. Control system----Operation system: Adopting traditional control plate, easy-operated, stable and reliable
2. Function advantage----Supporting with the capping machine, automatic cap-sender, automatic stopping, automatic control.
3. Steeples speed regulation---- According to production requirement can realize balance the cap-sending speed.

4. Electrical elements----Adopting international famous brand to ensure the remarkable quality, stability and high precision.
5. Machine elements----The parts contacted with the material use the 304 high-quality stainless steel
6. Maintenance condition----Fully accords to the GMP requirements, easy to disassemble and clean.

Specifications:

Production capacity	≤10000pc/h
Power source	220V/380V and others
