

SL-DBJ-H Automatic Bottle Bagging Equipment

Automatic bottling machines are patented, which improves the operational efficiency of your plant. The operator can change the bag in less than a minute, no tools required.

At the same time, the film tension of automatic bottling machine is very good in the industry. It can pack bottles of many shapes and sizes and then provide a tight film wrap around any shape and size of bottle. Film tension is easy to transport.

Features:

1. The design is simple and practical.
2. The positioning of the equipment is accurate, and it can be docked with blow molding machines, leak detection machines, and visual detection and labeling machines.
3. The automatic empty bottle packing machine can be adjusted according to different sizes of bottles, and one machine can pack bottles of different sizes, which is easy to operate.
4. The hot melt system automatically seals the bag.
5. Packaging bag requirements: PE bag, the maximum width is 850mm, this width is the width after packaging.
6. Bottles of different sizes and shapes can be packed.
7. The bottle pushing machine has a positioning device, and the positioning position can be adjusted.
8. The bagging platform is movable.

Products specifications:

Model	SL-DBJ-H
Power supply	AC220V 10% 50HZ (can be customized)
Power	1Kw
Air source	6-8Bar
Packing object	500ml-5000ml round or equilateral square bottle
Packing speed	3000-4500 bottles/hour
The height of the working platform	900mm
The max. width of the packed bottle	150mm
The max. height of the packed bottle	350mm
Color	White&green, white&blue
Machine size	2.75M*1.4M*2.6M (the linear length of the conveyor belt extending from the equipment is 500mm)
Weight	450kg
