

## *DG-type electromagnetic induction aluminum foil sealing machine*

### **Purpose and brief**

The machine is automatic line matching with aluminum foil sealing device that can automatically pre-installed aluminum cap seal species within the bottle through the sensor board from the seal, the foil is heated and sealed tight with the bottle.

This series of equipment for the manufacture of stainless steel shell, beautiful and generous; divided into air-cooled (DG-2000B type) and water (DG-4000B type) two kinds of models, easy to use air-cooled, water-cooled high efficiency.

### **Main technique parameters**

Sealing diameter:  $\Phi 14-40\text{mm}$   $\Phi 40 \sim 110\text{mm}$   
Sealing speed: 30-120 bottle / min (DG-2000B type)  
50-250 bottle / min (DG-4000B type)  
The induction head size: 700 x 170 x 95mm  
The lifting frame: 350mm  
Source: 220V 50Hz  
Power: 1.5kw / 2KW
