

## MKT 120-S / Packaging Machine for Cartons

**MKT** – *the universal cartoning machine with intermittent motion design*

Cartoning Machines in the MKT series are suitable for a wide range of packaging tasks due to their high quality mechanical engineering and modular design.

### **Description**

Forced opening of the folding cartons on the MKT is performed with two mutually independent suction systems. Difficult to open cartons, especially square folding cartons, can be dependably erected that way. Product-specific feed systems and integrated control systems provide for a smooth packaging process – with an output of up to 120 cartons/min.

### **Benefits**

- Modern balcony-type design in GMP-compliant design
- Highest flexibility due to highly dynamic servo drives
- Optimal accessibility
- Rapid format change with reproducible setting values
- Installation of all commercially available carton closure options
- Large format range
- Simple and clearly arranged operator control

## Technical data

**Output** \_\_\_\_\_ 120 cartons / minute

**Software** \_\_\_\_\_ In compliance with FDA guidelines,  
with capabilities for 21 CFR Part 11

**Connecting load** \_\_\_ Power 6kW, 3N/PE 400V/50Hz

**Weight** \_\_\_\_\_ 2,800 kg
